

The importance of Protected Areas as refuges for large bodied mammalian species

John G. Robinson & Joe Walston - World Parks Congress 2014

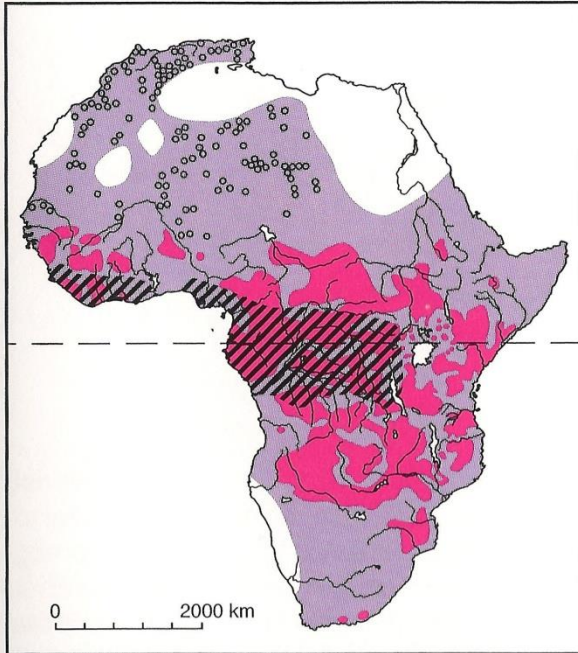

**Many of these large bodied species are sources of high value wildlife products, and are the target of illegal hunting, especially for the international trade.**

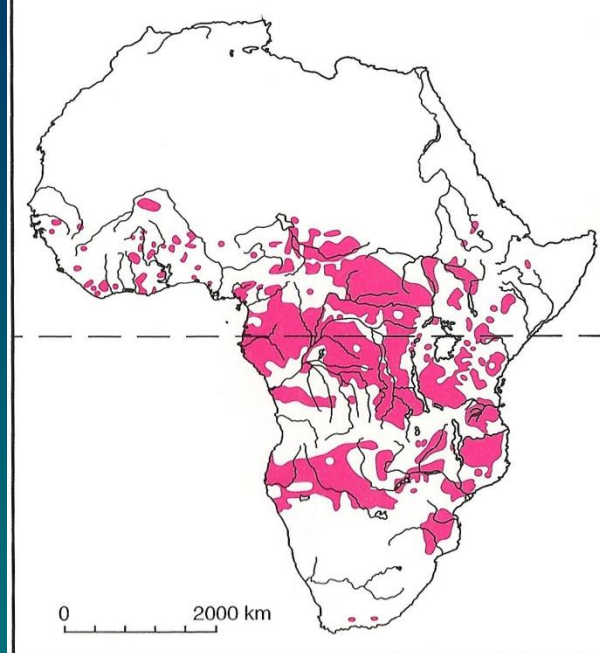

1800s

- Loxodonta africana* (1975)
- Former range
- Forest range

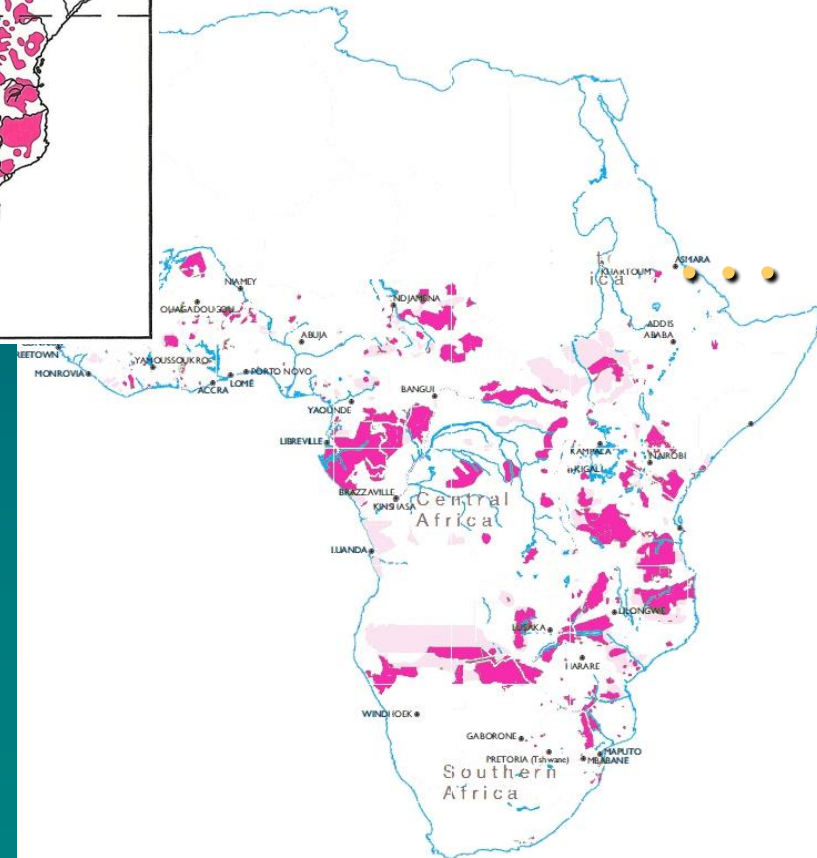

# The collapse of the range of Africa's elephants into parks & protected areas

1975

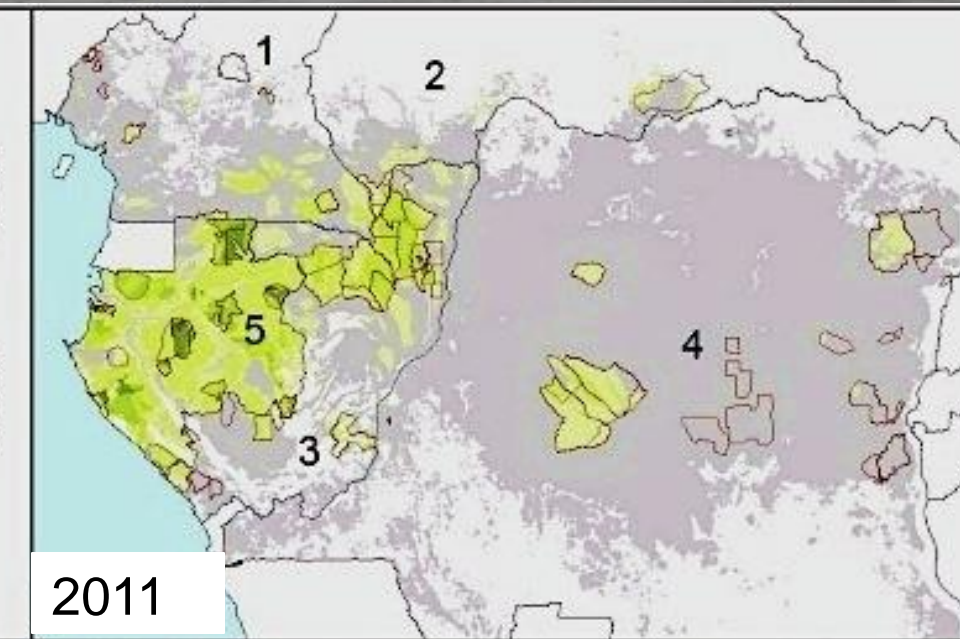

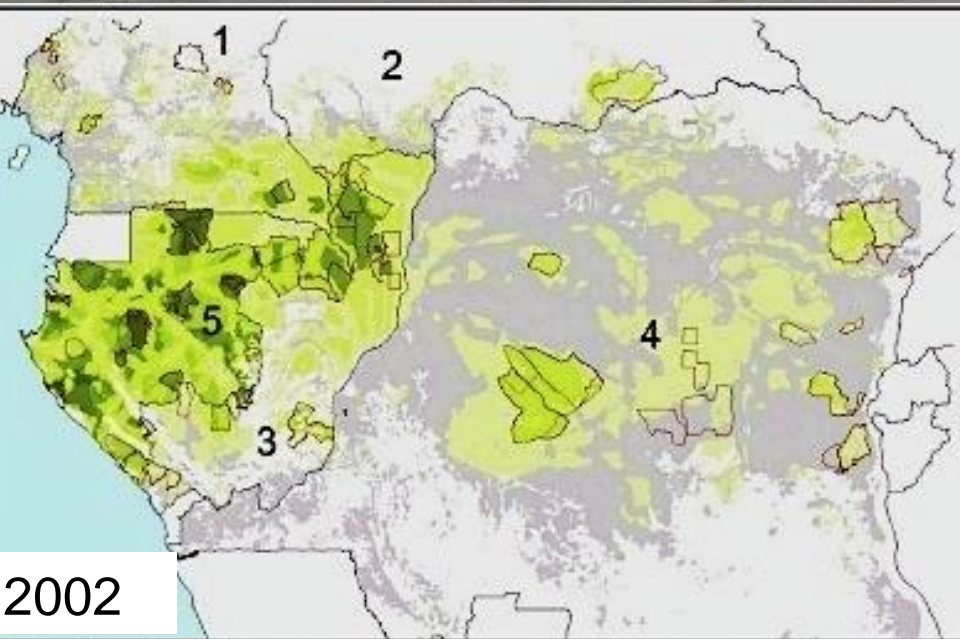

2007

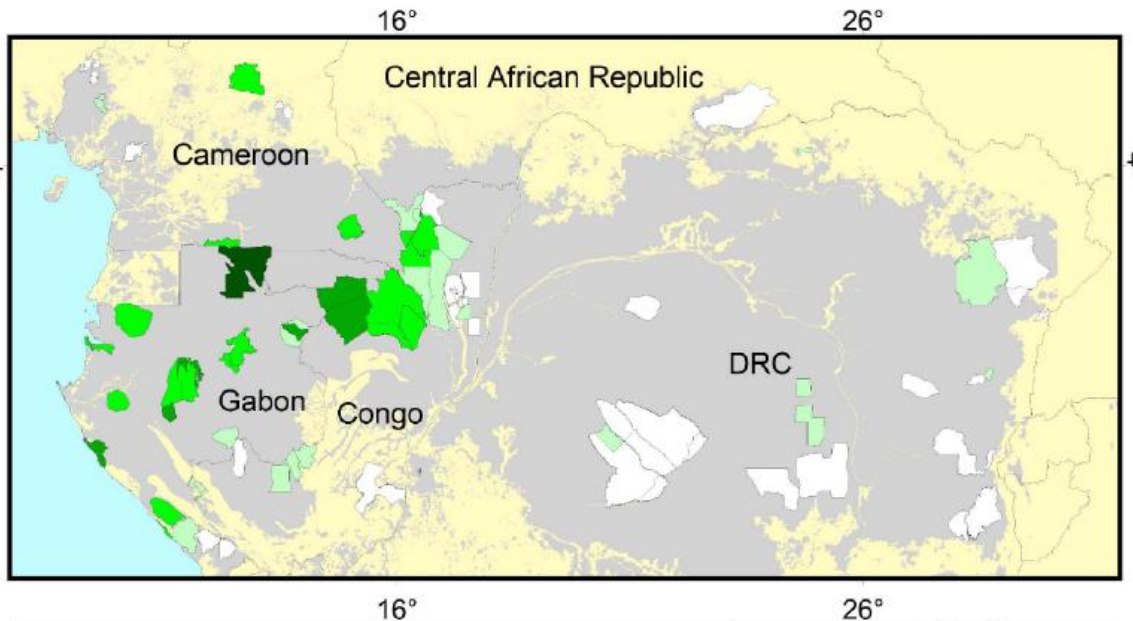

Blanc, J., Barnes, R.F.W., Craig, G.C., Dublin, H.T., Thouless, C.R., Douglas Hamilton, I., Hart, J., 2007. African Elephant Status report 2007: an update from the African Elephant Database, In Occasional Paper Series of the IUCN Species Survival Commission, N° 33. p. vi + 276 pp. IUCN / SSC African Elephant Specialist Group, Gland, Switzerland.

Kingdon, J., 2001. The Kingdon Field Guide to African Mammals. , 2 edn. Academic Press, London.

Elephant dung/ km walked

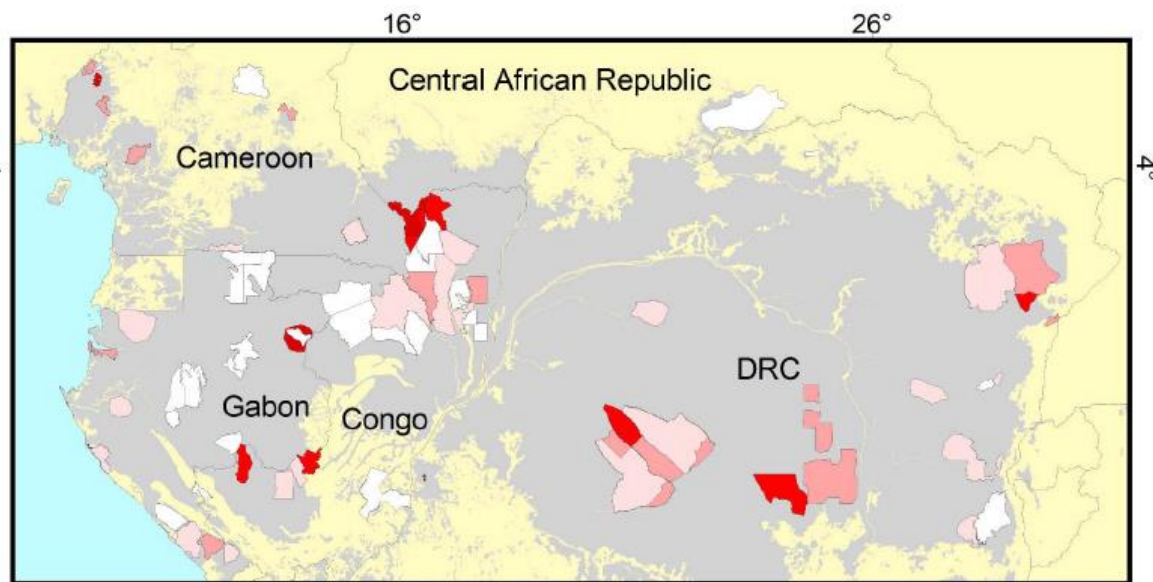

0 - 0.3  
0.3 - 1

1 - 2.7  
2.7 - 5.3  
5.3 - 15.1

Encounter rate of elephant  
dung /km transect for 80  
survey sites

Maisels et al. 2013. PLoS One 8.

Encounter rate of hunter  
sign/km transect for 80  
survey sites

Human sign/ km walked

0 - 0.6  
0.6 - 1.4

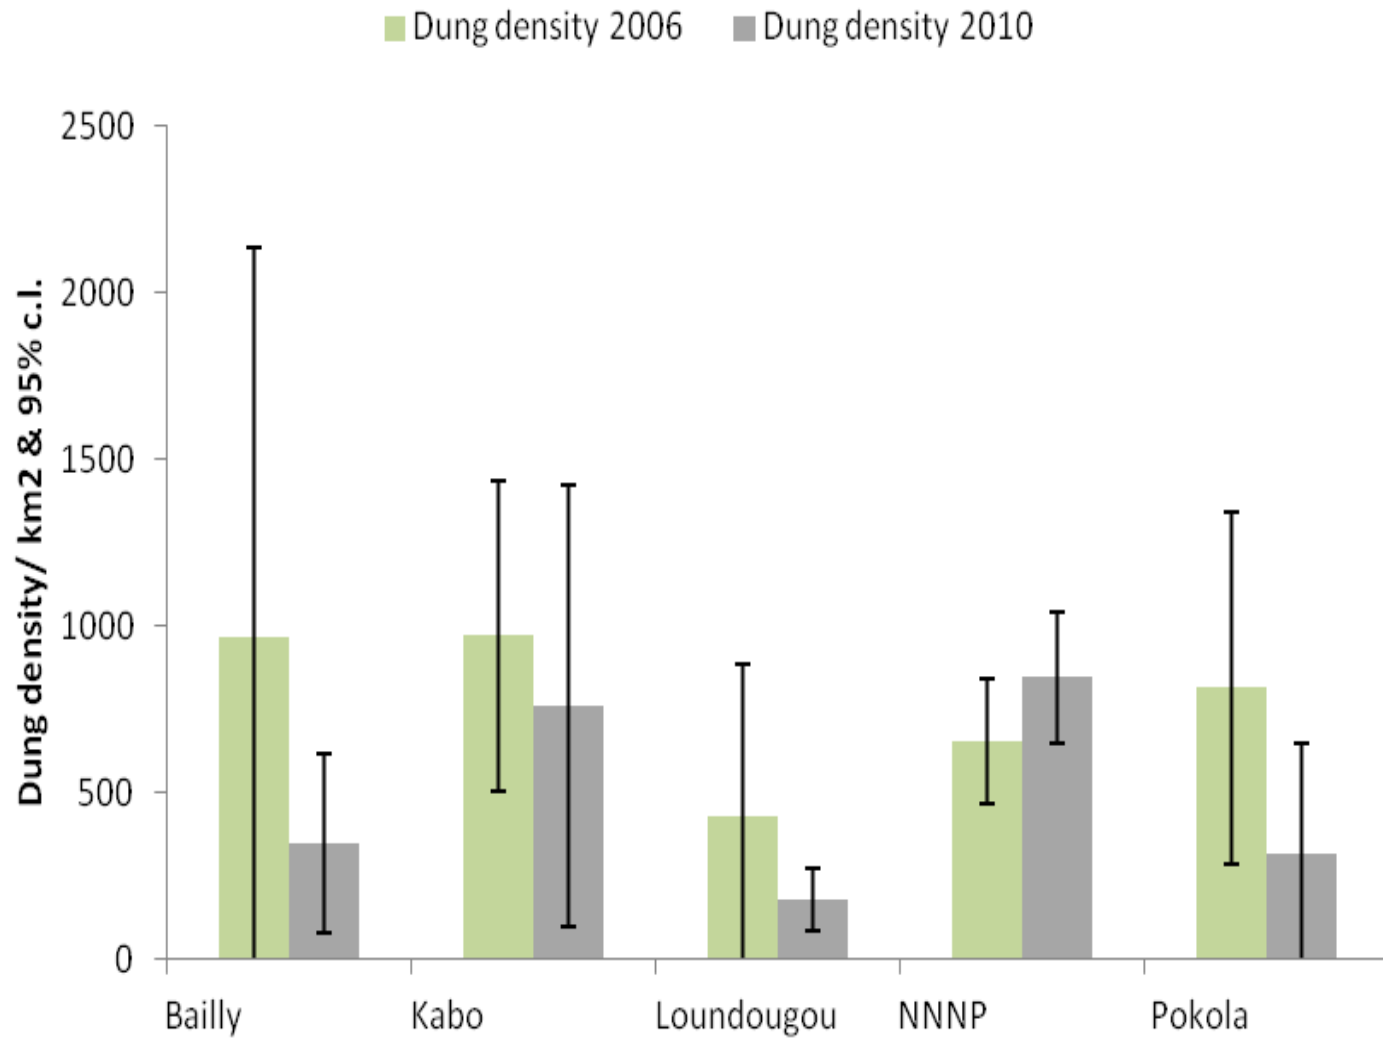

1.4 - 2.8  
2.8 - 4.3  
4.3 - 8.8

0 500 Kilometers

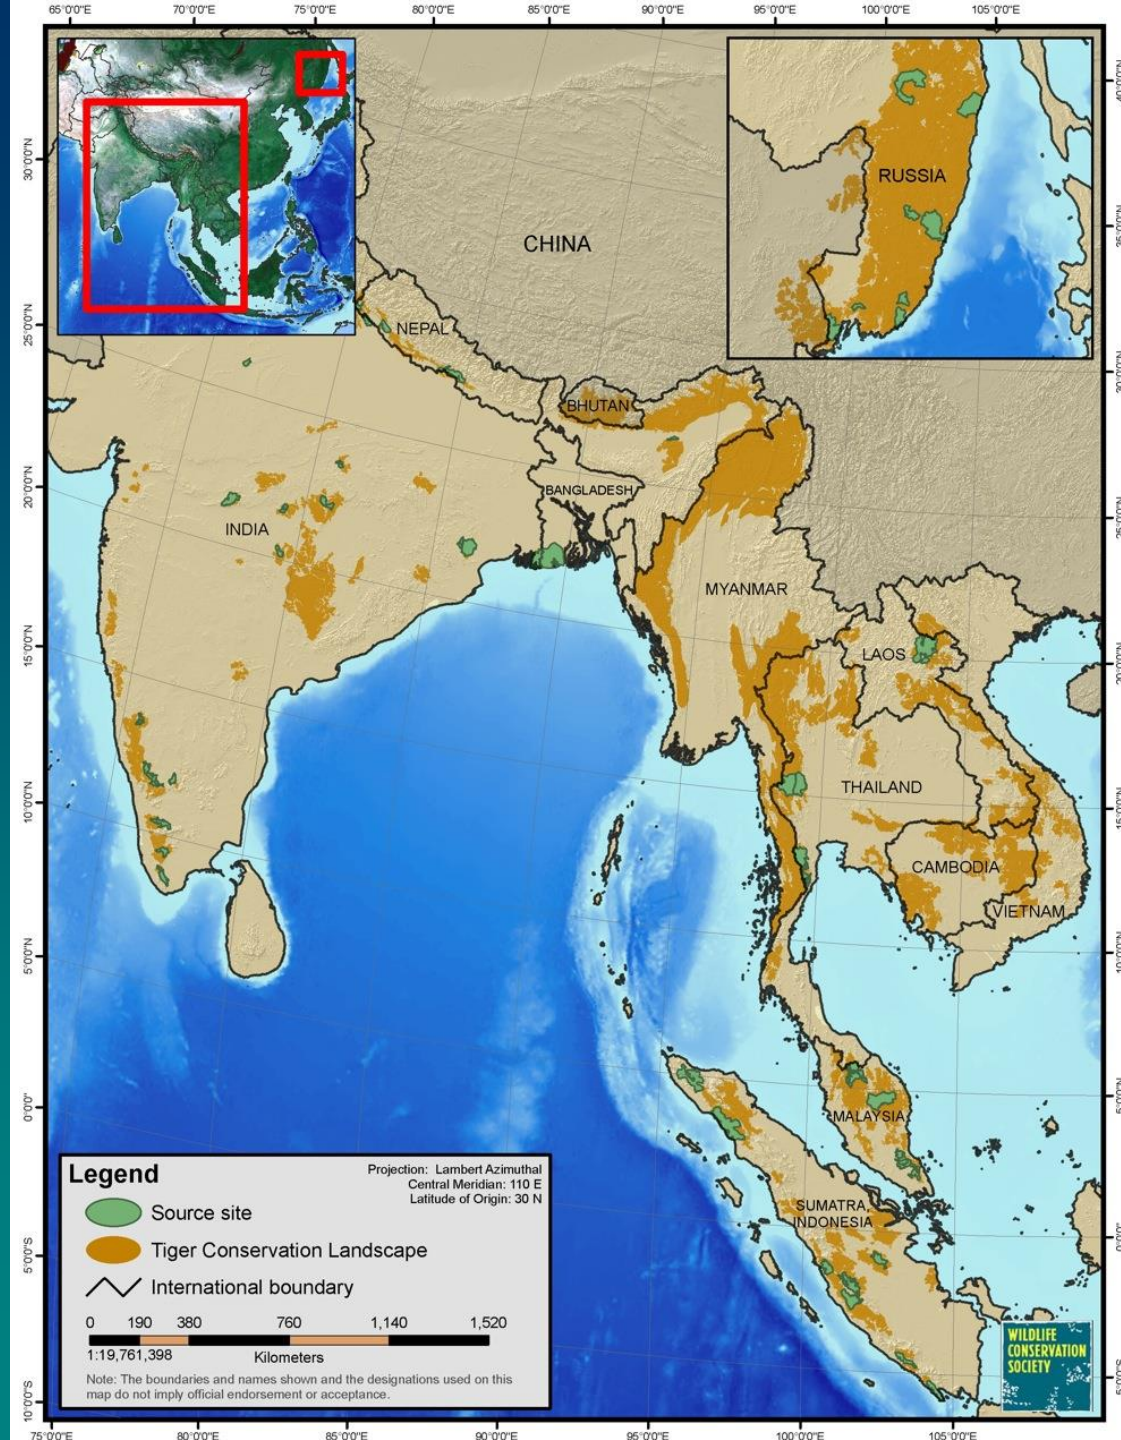

Statistically significant for Kabo and Polola

# The collapse of the range of the tiger into parks and protected areas.

## 42 Source Sites across the Tiger's range

- 18 in India
- 8 in Sumatra, Indonesia
- 6 in Russian Far East
- 3 in Malaysia
- 3 in Nepal
- 2 in Thailand
- 1 in Bangladesh
- 1 in Lao PDR
- Bhutan and Myanmar incompletely evaluated
- No Source Sites in Cambodia, China, DPR Korea, or Vietnam

Collectively, Source Sites, mostly parks and protected areas, cover 90,000 km<sup>2</sup> (only 50,000 km<sup>2</sup> is outside of India and Russia).

- Less than 0.5% of historical range
- Just 6% of their current distribution.

Source Sites contain 2,200 tigers (which is 70% of all remaining tigers).

# Persistence of tigers in Huai Kha Khaeng Wildlife Sanctuary, Thailand: The importance of protection

- SMART patrolling system initiated in 2006
- Focus on stopping poaching of prey
- Considerable government investment in patrolling
  - 19 guard posts
  - 150 rangers
- MIST implemented in January 2008

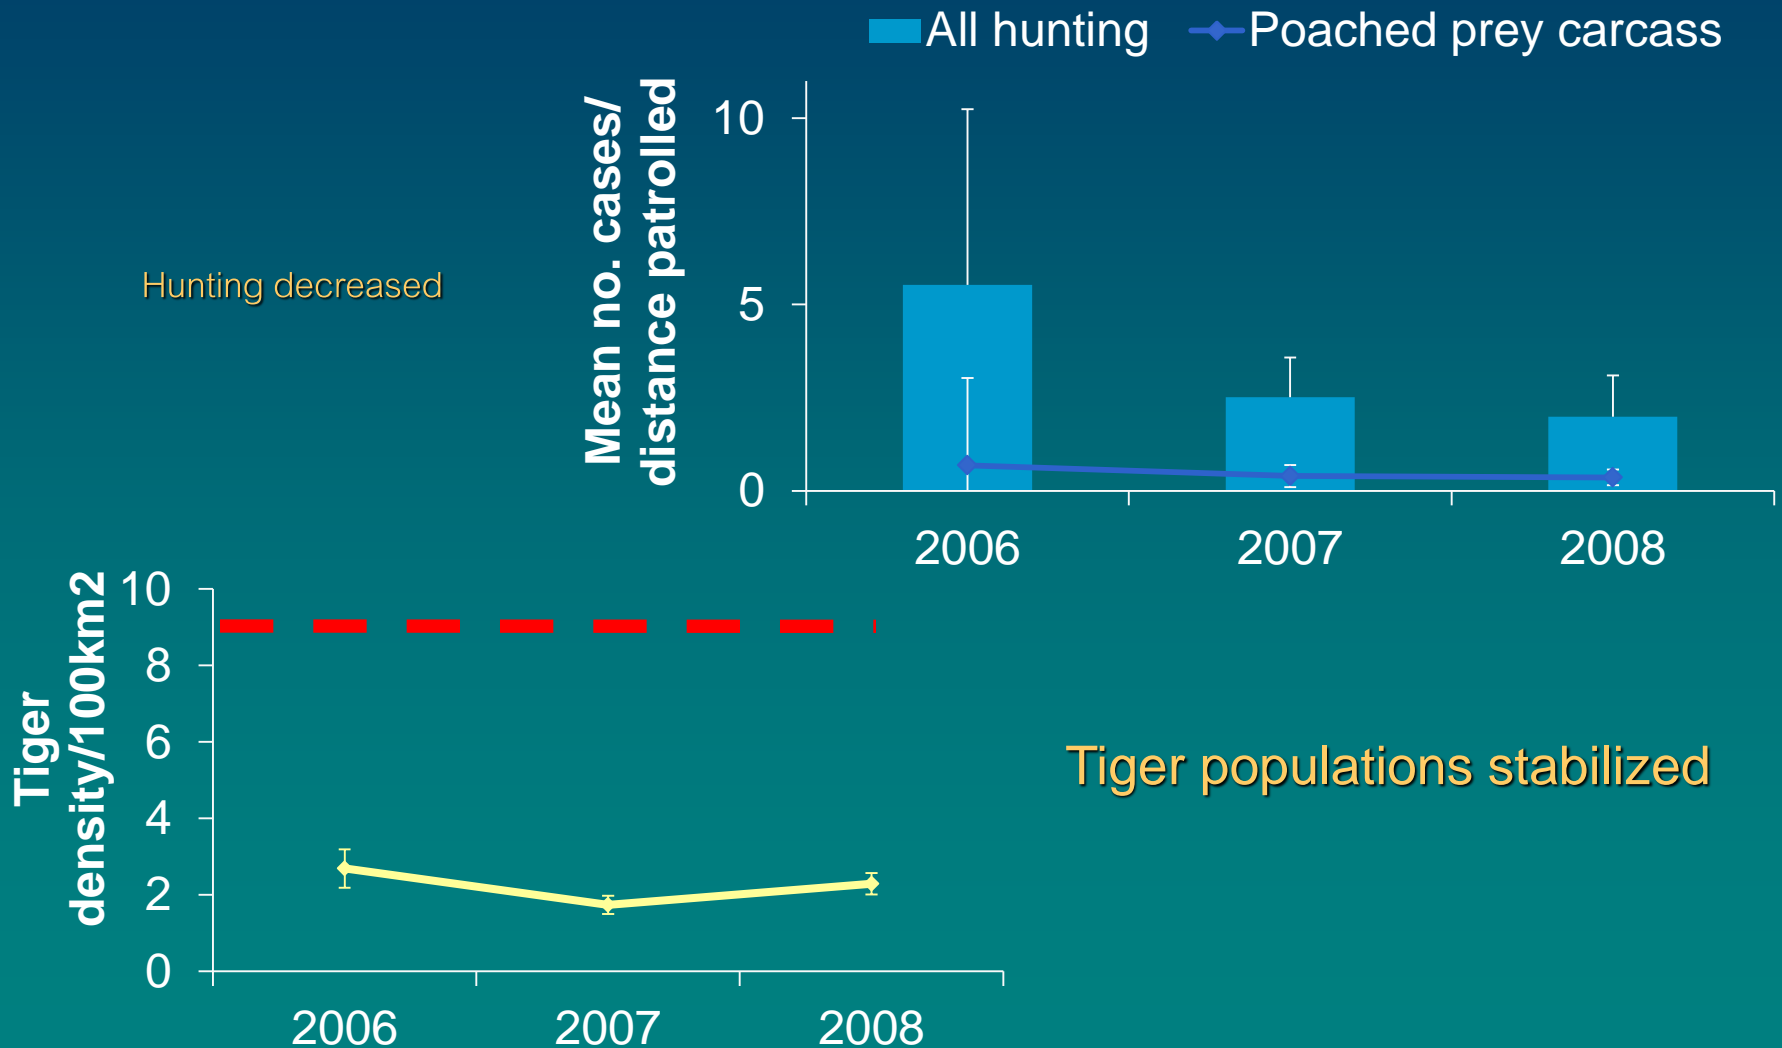

Guard posts

SMART patrolling pushes illegal hunting out to the borders of the park.

# Tiger populations stabilized

Gaur

Banteng

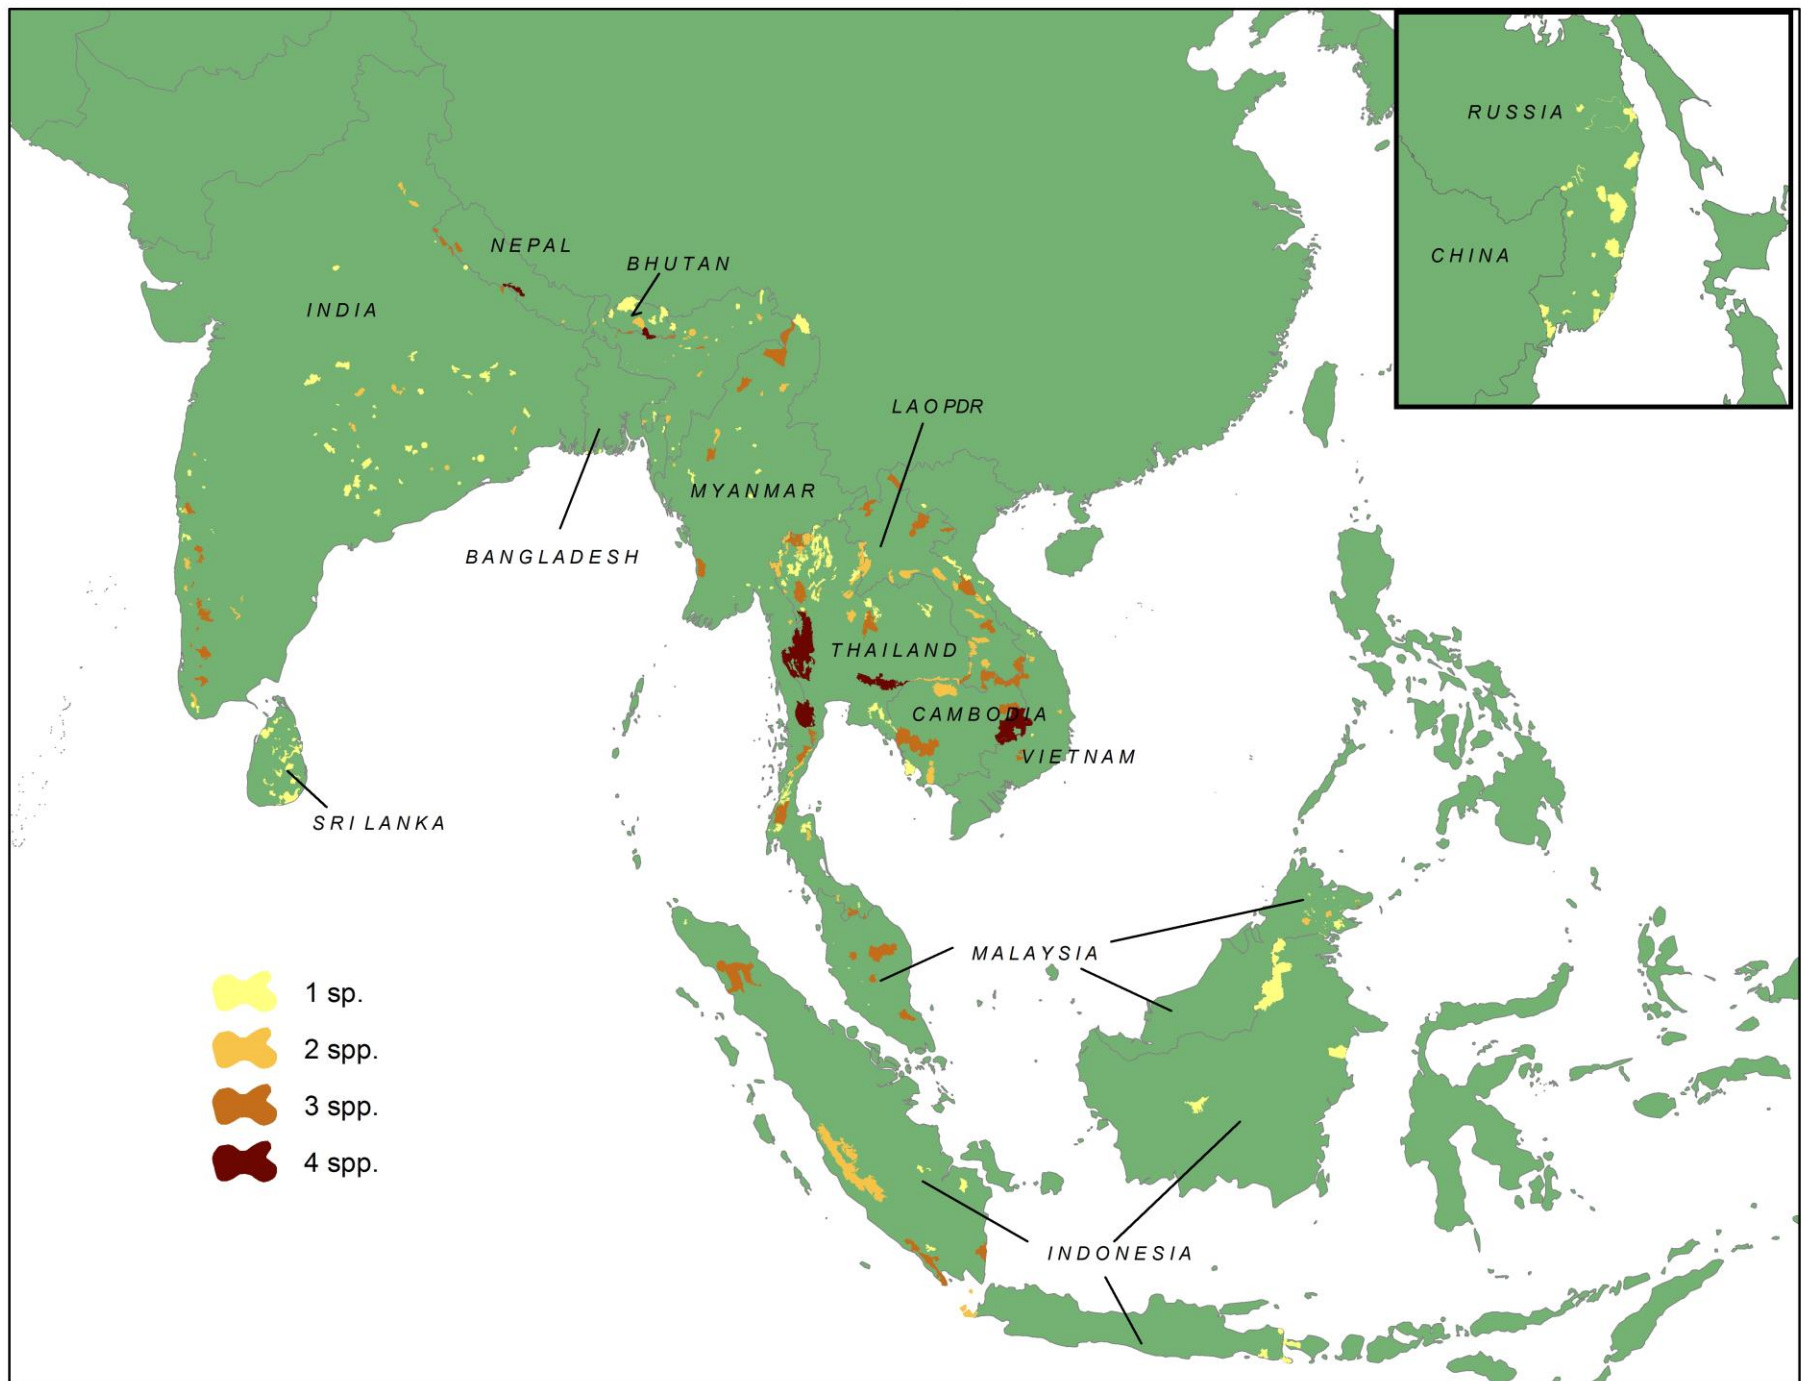

# Proportion of range and total population in Protected Areas

Species	Range Area (sq km)	Range in PAs (sq km)	% range in PAs	% total popn in PAs
Tiger	1,111,101	219,649	20%	73-83%
Asian elephant	926,776	186,339	20%	65-85%
Gaur	778,526	147,250	19%	65-85%
Banteng	190,933	106,180	56%	85-95%
Greater one-horned rhino	5,384	5,200	97%	>98%
Sumatran rhinoceros	25,205	24,650	98%	>98%
Javan rhinoceros	996	996	100%	100%

# Parks and Protected Areas for Large Mammals

---

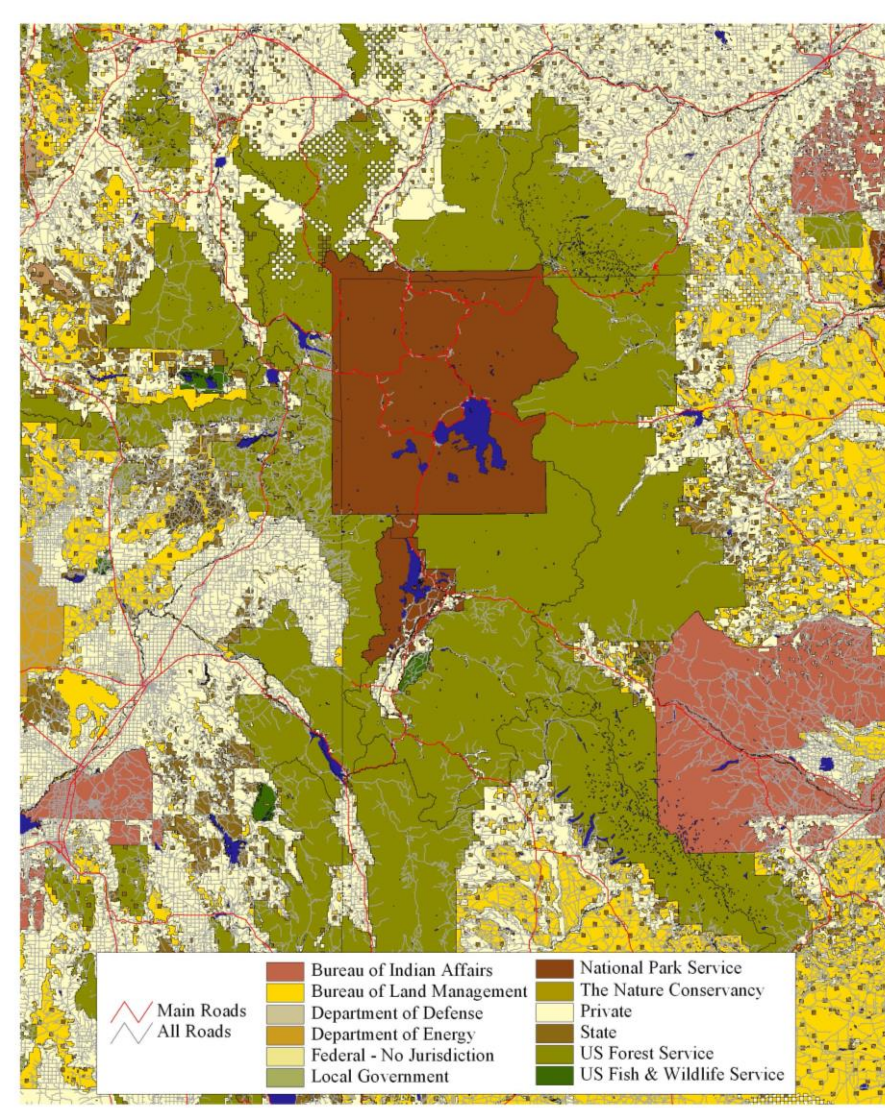

- are necessary
  - to provide protection to wildlife from direct threats like hunting
  - to maintain habitat, food supply, and favorable ecological conditions
- and while they are not sufficiently large for many large bodied and wide ranging species
- they provide a source population to seed animals across the wider landscape.
- Ultimately, effective conservation will depend on both operating at the scale of parks and protected areas and in addition at the landscape scale.

# Elephant movement across the Nouabale – Likouala landscape

# Wolverines in the Greater Yellowstone landscape

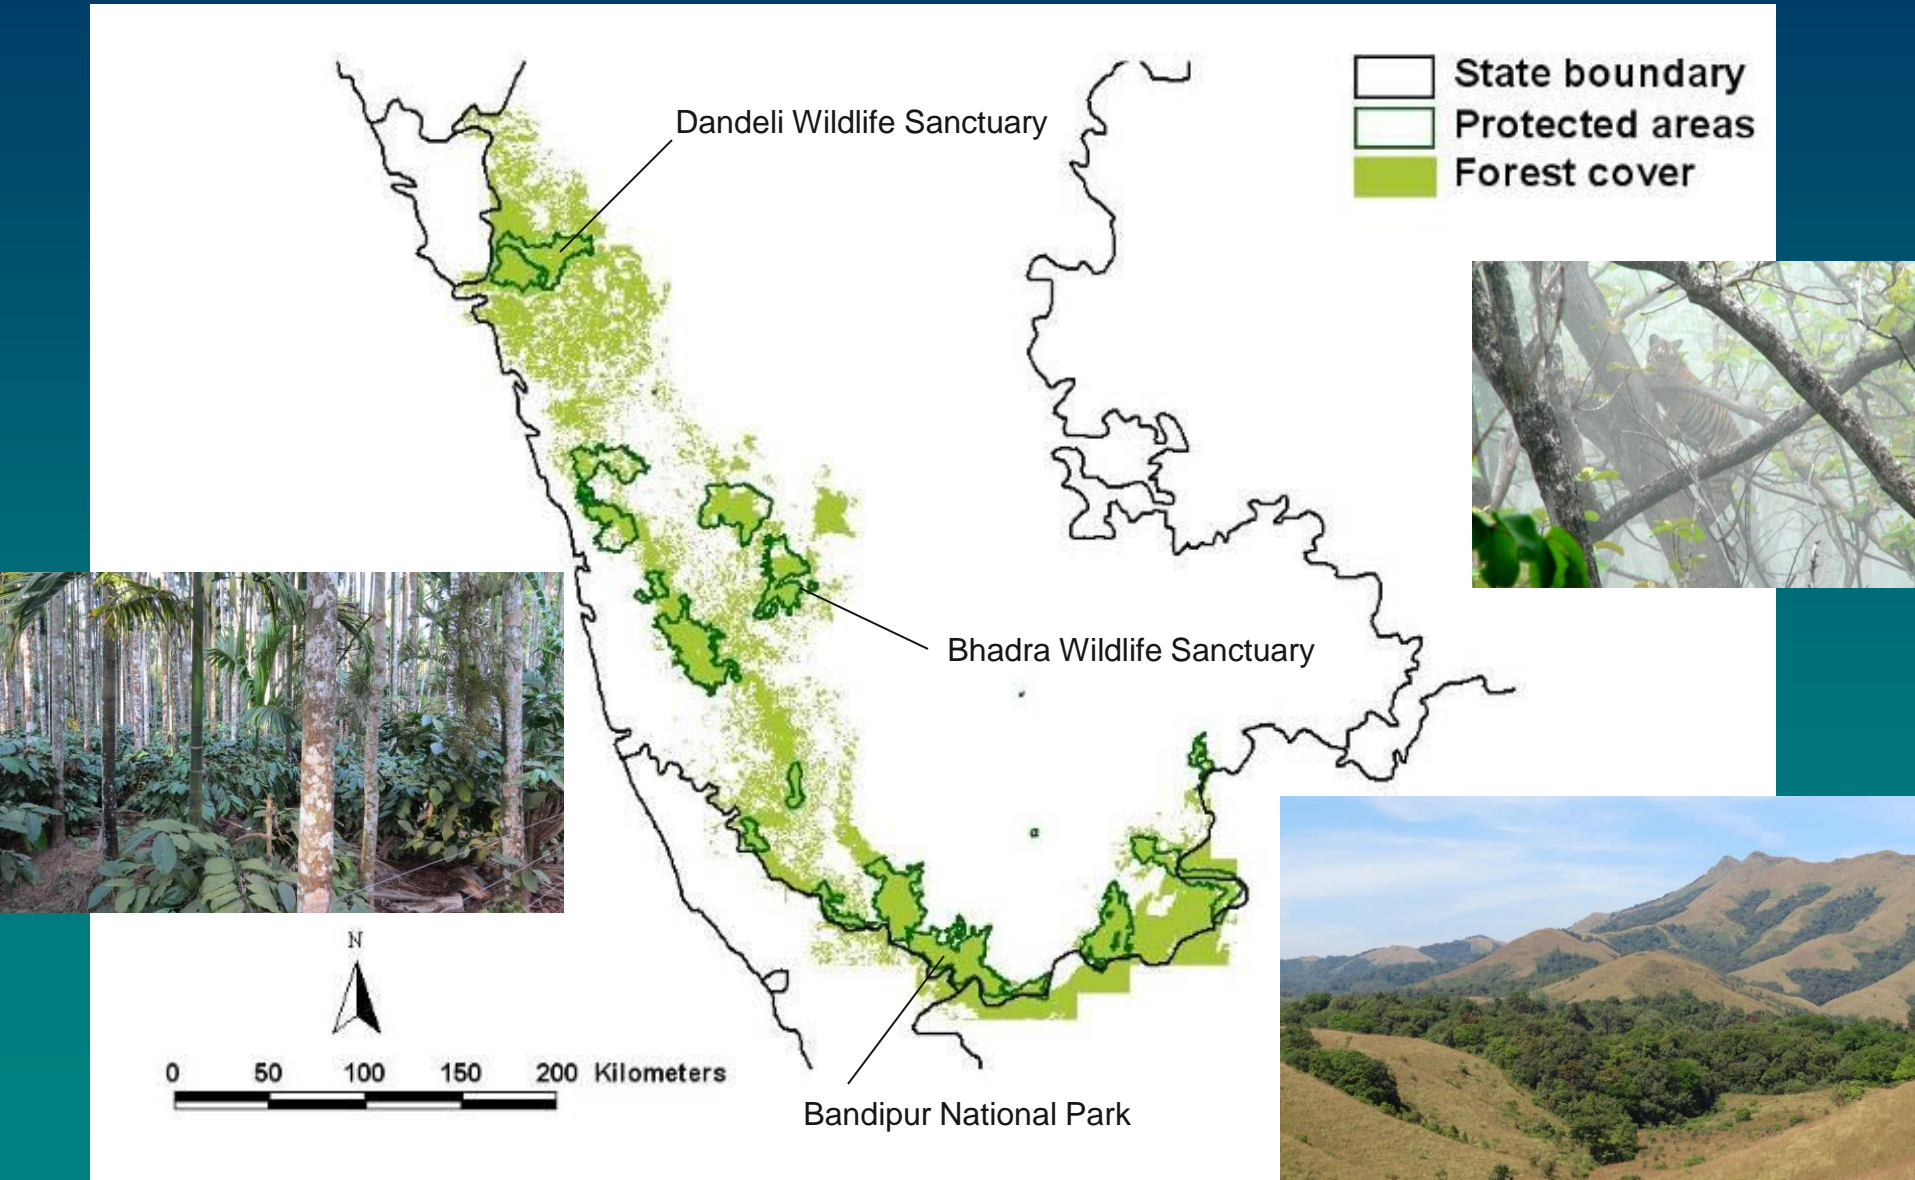

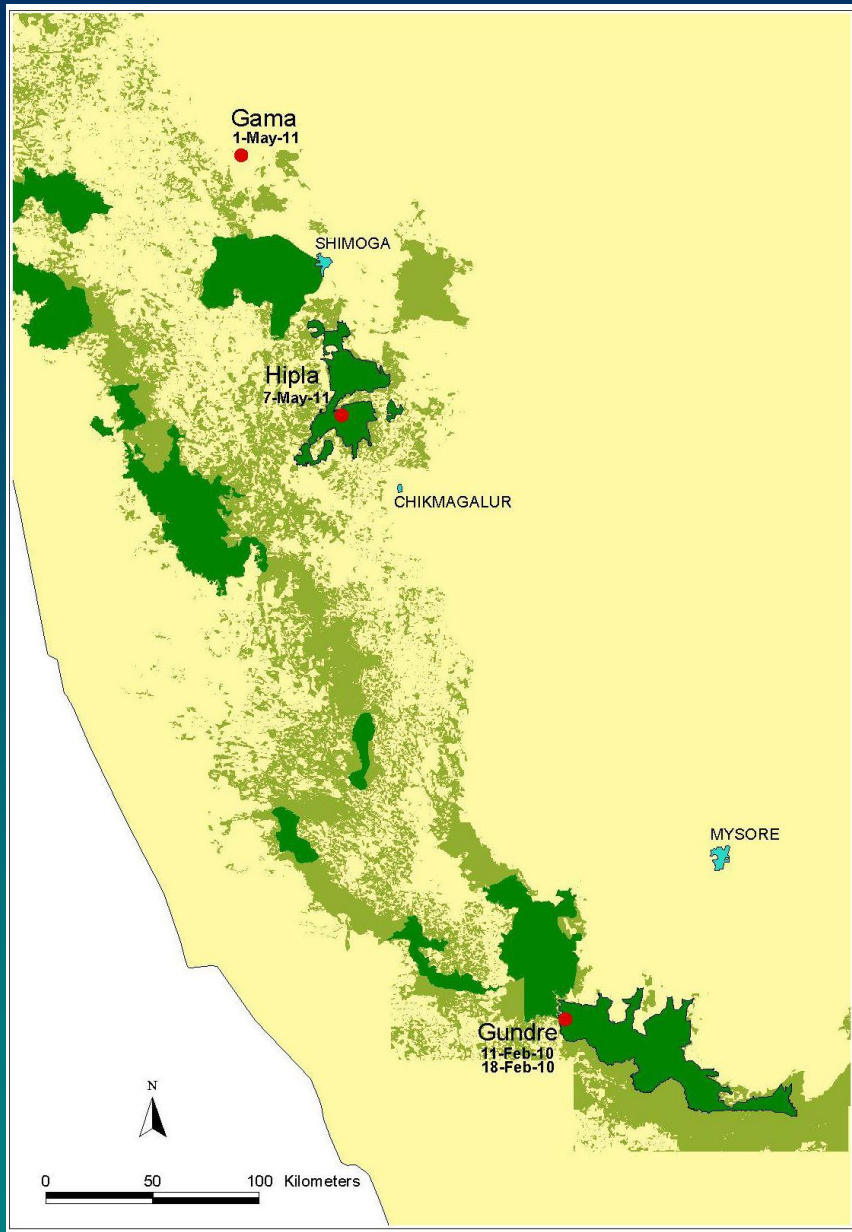

- M56 young male wolverine collared Dec 2008.
- By July 2009, had moved ~600 miles, through 6 National Forests, 3 BLM districts, 1 National Park, and 2 states. Crossed 1 Interstate, 3 US highways, 5 state highways

# Tiger Movements across the Malenad-Mysore landscape, Karnataka, India

**Tiger BPT-241  
Bandipur  
Tiger  
Reserve  
February  
2010**

**Straight line  
movement  
of 280 kms**

**Hipla  
Hadlu  
Bhadra  
Wildlife  
Sanctuary  
May 2011**

**In 2006, Tiger BDT-130 photo in Bhadra, then photo-captured in Dandeli in 2008 and 2009 (197 kms)**

# Key recommendations

---

- Recognizing that parks and protected areas are the last sanctuaries of many large bodied, high value species
  - Active patrolling and monitoring (e.g., SMART systems), law enforcement and informant systems will be required in many cases.
  - Often individual animals of these species will require direct protection
- Recognizing that many of these species are wide ranging
  - Maintaining a natural matrix and habitat connectivity will be essential over the long term.

**Thank You.**
