

# Future scenarios, marine Biodiversity: current status and global gaps, current trends and global needs

Mark Spalding

***Acanthus ilicifolius***

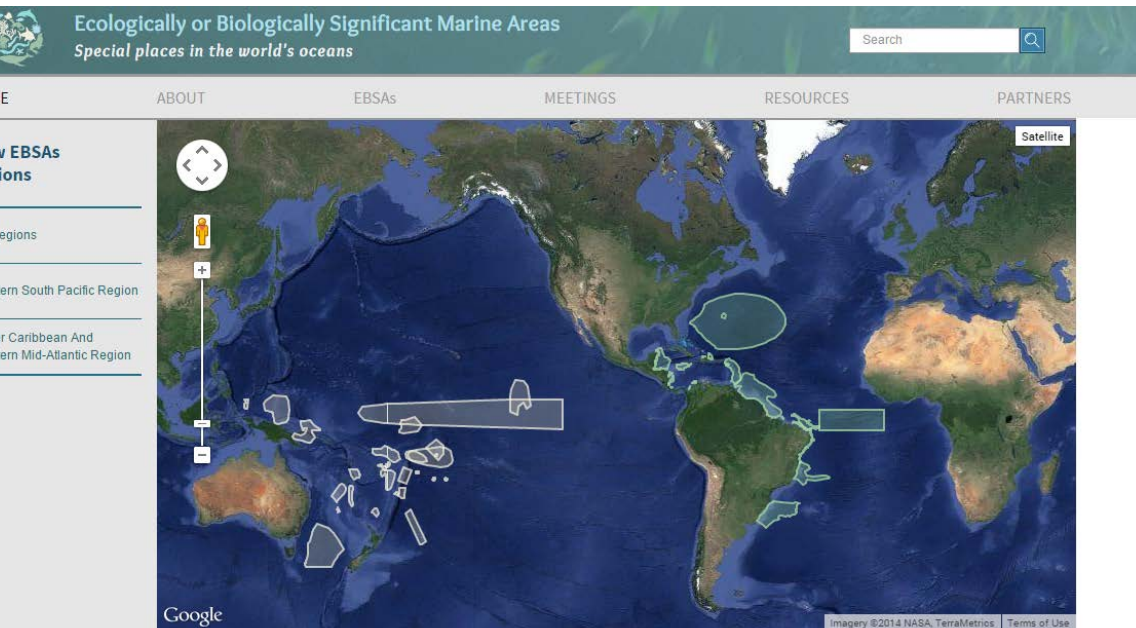

*Acanthaceae*  
shrub or herb, leaf slightly lobed with serrated margin, flower light blue or violet

***Acrostichum aureum***

*Peridaceae*  
fern, pinnae reddish when young and with blunt tips

***Aegialitis annulata***

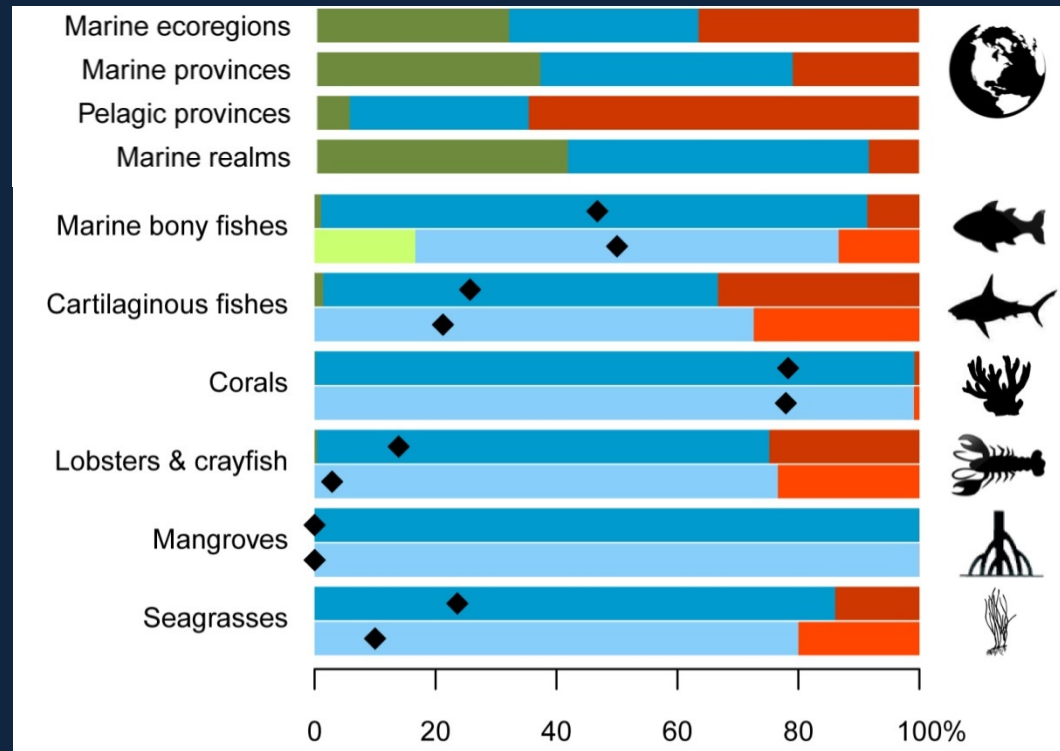

*Plumbaginaceae*  
shrub, flower white, leaf dull above

DISCLAIMER: The designations employed and the presentation of material in this map do not imply the expression of any opinion whatsoever on the part of the Secretariat concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

# Current status and global gaps

- 13% countries/territories meet spatial target for marine coverage
- 32% marine ecoregions meet target levels of coverage
- 0.2% of high seas covered
- 5% pelagic provinces meet target levels of coverage

*Red = no PA coverage*  
*Blue = partial PA coverage*  
*Green = complete coverage*

*Diamonds = % species with target levels of coverage*  
*Upper bars = all spp*  
*Lower bars = threatened species*

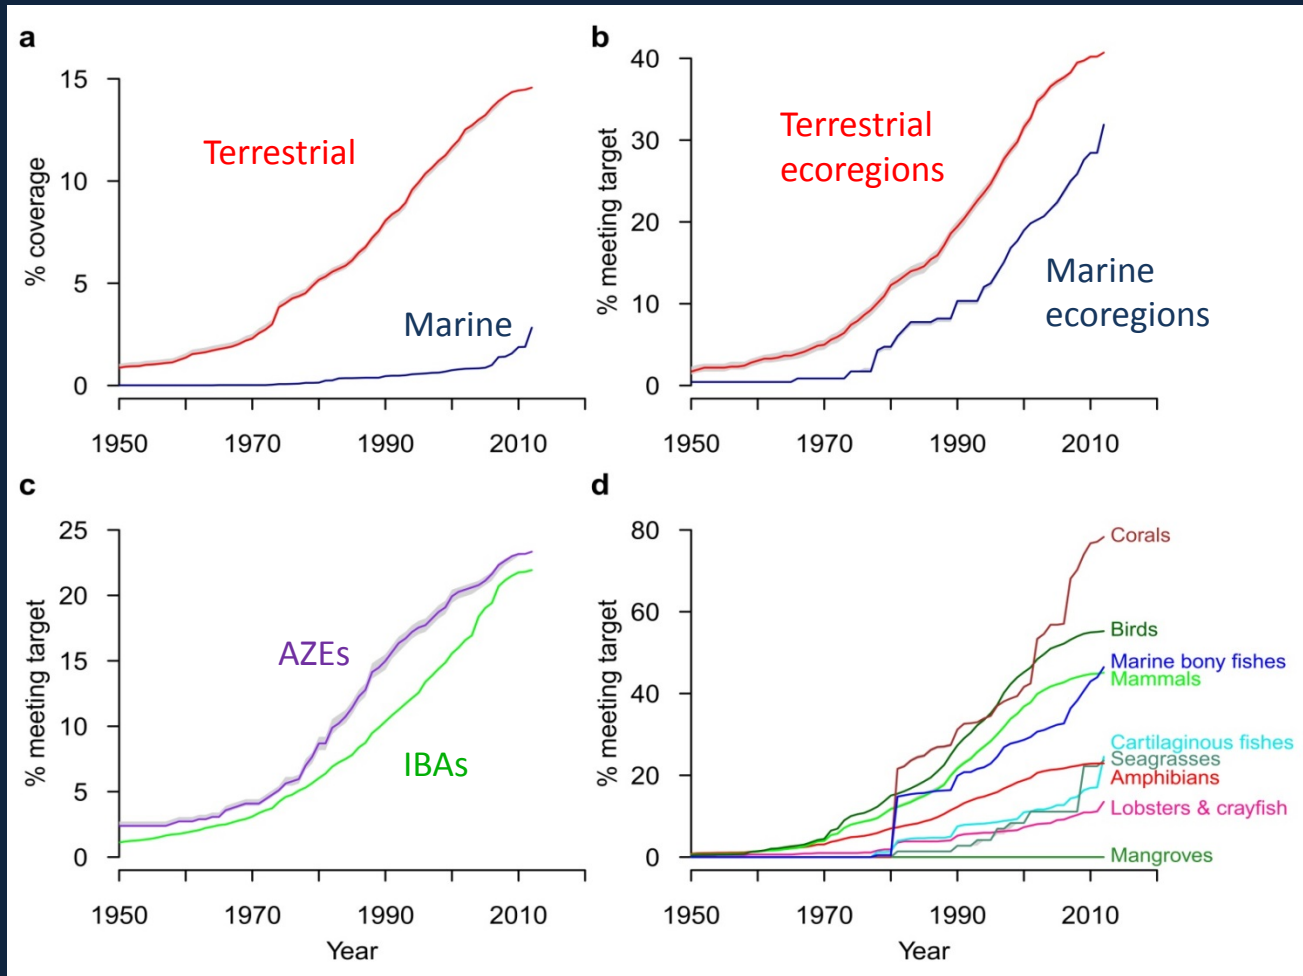

Butchart, Clarke, Smith, Sykes, Scharlemann, Harfoot, Buchanan, Angulo, Balmford, Bertzky, Brooks, Carpenter, Comeror, Cornell, Dulvy, Ficetola, Fishpool, Harwell, Hilton-Taylor, Hoffmann, Joolia, Joppa, Kingston, May, Milam, Polidoro, Ralph, Richman, Rondinini, Skolnik, Spalding, Stuart, Symes, Taylor, Visconti, Watson, and Burgess, in rev, Shortfalls and solutions for meeting national and global conservation area targets.

# Current trends

PA coverage has increased since 1990 by:

92% for terrestrial  
513% for marine  
environments

# Beyond Aichi?

*"...importance for biodiversity...ecologically representative...well connected"*

- Address major gaps:
  - High seas, pelagic and deep oceans
- Improve prioritisation and guidance:
  - Improve data - species, habitats, processes
  - Improve tools

*“effective...other effective area-based conservation measures...  
integrated into wider seascapes”*

- Define, “other measures” and support them
  - Effective fisheries management interventions
- Address “effectiveness”. Sites should only be counted if they deliver ecological protection.
  - Place for special recognition of no-take
- Address the places beyond targets (currently the other 90%)
  - Marine spatial planning, ocean zoning
- Interim goals for 2030
  - 5% no-take
  - 25% traditional MPAs
  - 50% of ocean zoned and managed sustainably
- Aspirational longer-term goals
  - 20-30% no-take
  - 100% sustainably managed

# Future scenarios: Ecosystem Services

Mark Spalding

# Two conservations?

- Nature
- Forests, wetlands, rivers
- Biodiversity and habitats
- Ecological processes
- Natural capital
- Green infrastructure
- Asset classes in an ecosystems market
- Ecosystem services

A long tradition:  
Ecosystem services and  
protected areas have a  
long history

# A strong commitment: Aichi T11

“...areas of particular importance for biodiversity  
and ecosystem services...”

# A powerful incentive

## Mangroves in Thailand - convert or conserve?

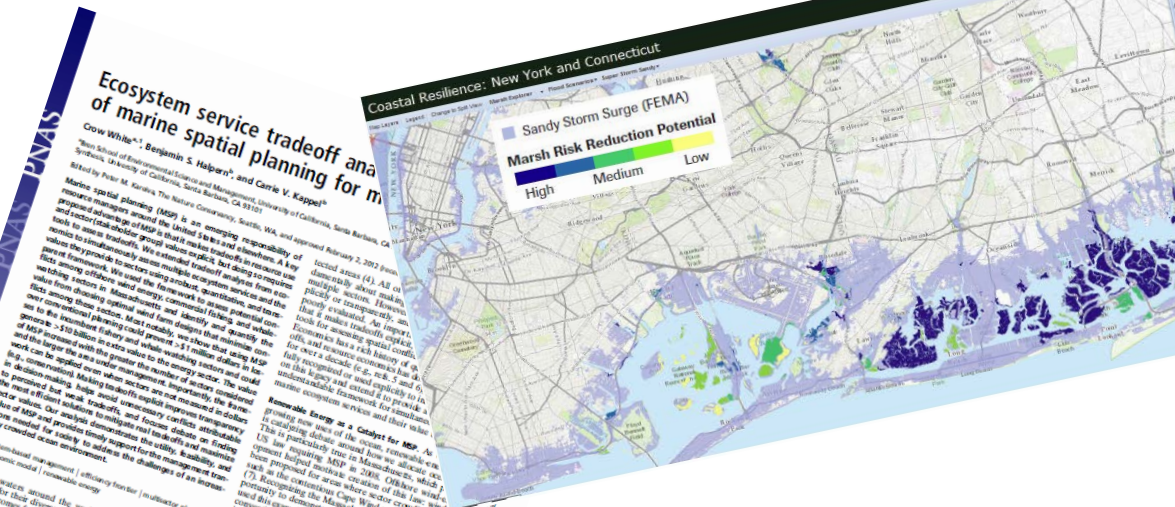

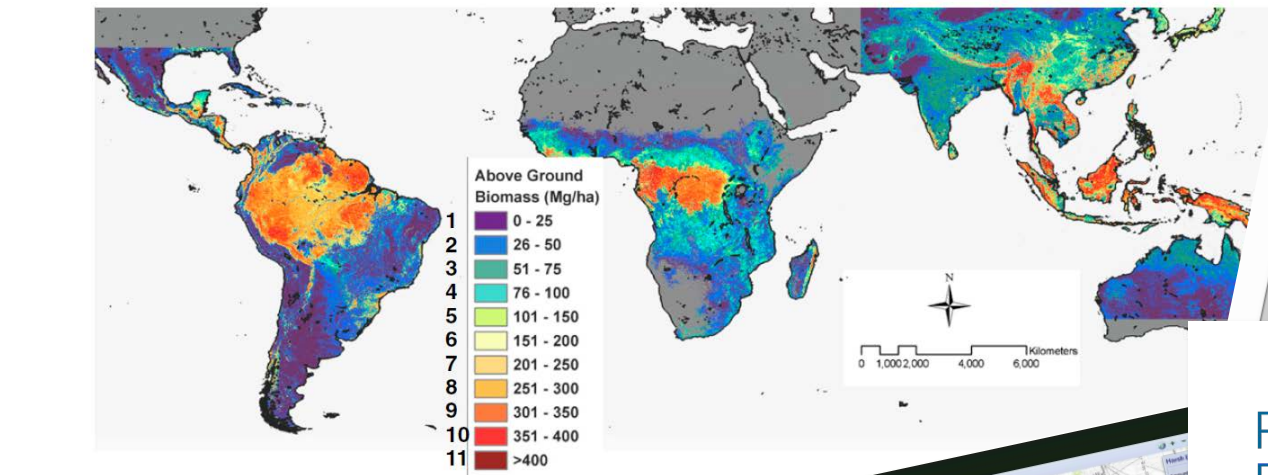

# A powerful incentive

## Mangrove Capital partnership

The screenshot shows the LIVELIHOODS website. The header includes the LIVELIHOODS logo and navigation links. The main banner features a photograph of a person in a colorful sari standing in a lush green field, with the text 'A unique carbon investment fund' and 'producing high social, economic and environmental value'. Below the banner, the text 'Why invest in the Livelihoods Fund?' is visible. The 'Our Partner Companies' section displays logos for Danone, CDC climat, LA POSTE, CREDIT AGRICOLE S.A., Schneider Electric, HERMÈS PARIS, Firmenich, SAP, MICHELIN, and Voyageurs DU MONDE.

### INTRODUCTION

Threats to the marine environment are complex, multiple, and often overlapping or synergistic. Mitigating these threats, likewise, is not simple, but rather relies on

\* The authors would like to thank Lisa Duarte of the USGS Gap Analysis Program and Mimi Piro of the NOAA National MPA Center. Also we thank Simon Riehl of UNEP-WCMC who assisted in the preparation of the MPA layer, and the other staff in the UNEP-WCMC's Marine Assessment and Decision Support Programme. UNEP-WCMC's contribution to this article was partially supported by the Marine Conservation Biology Institute.

fisheries

Tourism

# Coral reef MPAs

- 32% of world's reefs are in MPAs
- 17% of coastal protection value in MPAs
- 36% of tourism value
  - Malaysia – 6% of reefs, 16% of tourism value
  - Indian Ocean – 27% of reefs, 11% of tourism value
- 27% of fisheries value
  - No-take contributed 2% of MPA related fish catch, rising to over 10% in Kenya and Bermuda

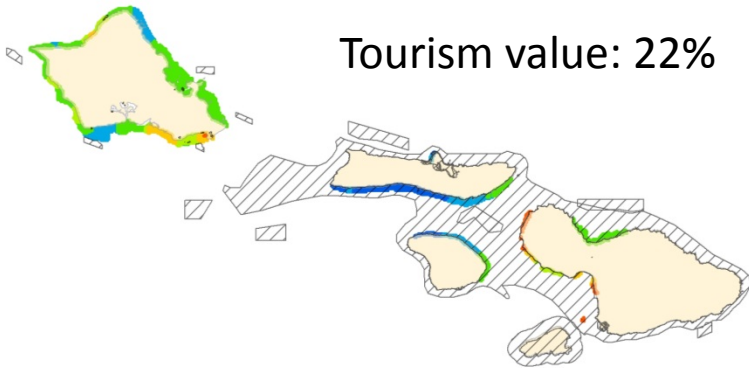

Fisheries value: 39%

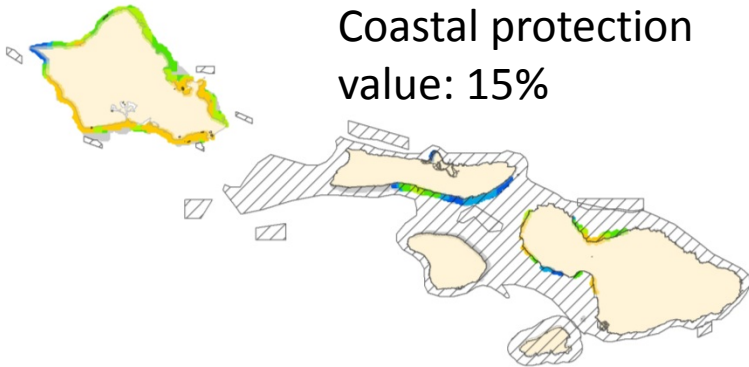

Hawaii's coral reefs: 88% in MPAs

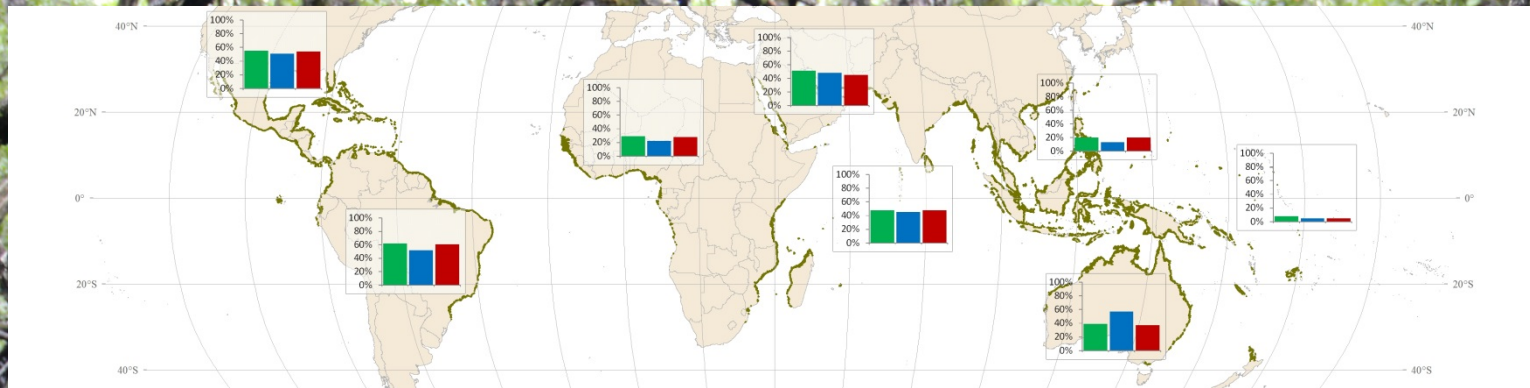

Tourism value: 22%

Coastal protection value: 15%

## 1315 Amphitheatre:

Location, location, location: are we putting MPAs in the right places

## 1530 Ocean+ Pavillion

How can we build ES into wider MPA prioritisation

Attaining Aichi Target 11:  
How well are marine ecosystem services covered by protected areas?

Discussion Paper prepared for the World Parks Congress, Sydney, November 2014

# Beyond Aichi?

## Recommendations

- We're all talking about it:
  - LMMA, DRR, Tourism, Industry, REDD+
- Definition and delineation
  - Need tools to quantify and map
  - Metrics – not just monetary
  - Focus – regulating, provisioning?
- Prioritisation:
  - Areas of Critical Importance for Ecosystem Services
- Act fast. We need this well before 2020!  
“Nature needs half” or:  
Humans need nature

# Thank you
