Lessons from Japan

- ❑ Things we could not control and could control
- ❑ The role of engineering/technology
- ❑ More recognition on the roles of ecosystem services in reducing disaster risks
- ❑ Good mix of engineering and ecosystem services

The purposes

Strengthening the role of protected areas in reducing
natural disaster risks

Rationale

- Frequency and magnitude of natural disaster damages
 - Earthquake/Tsunami
 - Volcanic eruptions
 - Flooding
- Vulnerable regions/areas
 - Population density
 - Inadequate Infrastructure
 - Inadequate safety measures

Prevention/reduction

- ❑ Engineering/technology
- ❑ Population re-distribution
- ❑ Prediction
- ❑ Roles of protected areas

Roles of Protected Areas

- ❑ Flooding control
- ❑ Landslide control
- ❑ Tidal waves and storm surges control
- ❑ Drought and desertification
- ❑ Fire

Let's do this together!

- Japan has been working to move the PAs for DRR forward
 - Advocacy in Japan, especially following the Great East Japan Earthquake/Tsunami
 - DRR as a key agenda item in Asia Parks Congress
 - DRR as a theme of Stream 4 of this WPC
 - Hosts for the 3rd World Conference on DRR, including launch of the new Hyogo Framework for Action
- PA community engagement to move forward together!
